

SPIDER

**TERMITIE
SAYS:**

All spiders have eight legs
and most have eight eyes.
The largest spider is the
Goliath Birdeater spider.
The female's legs can span
the width of a dinner plate.

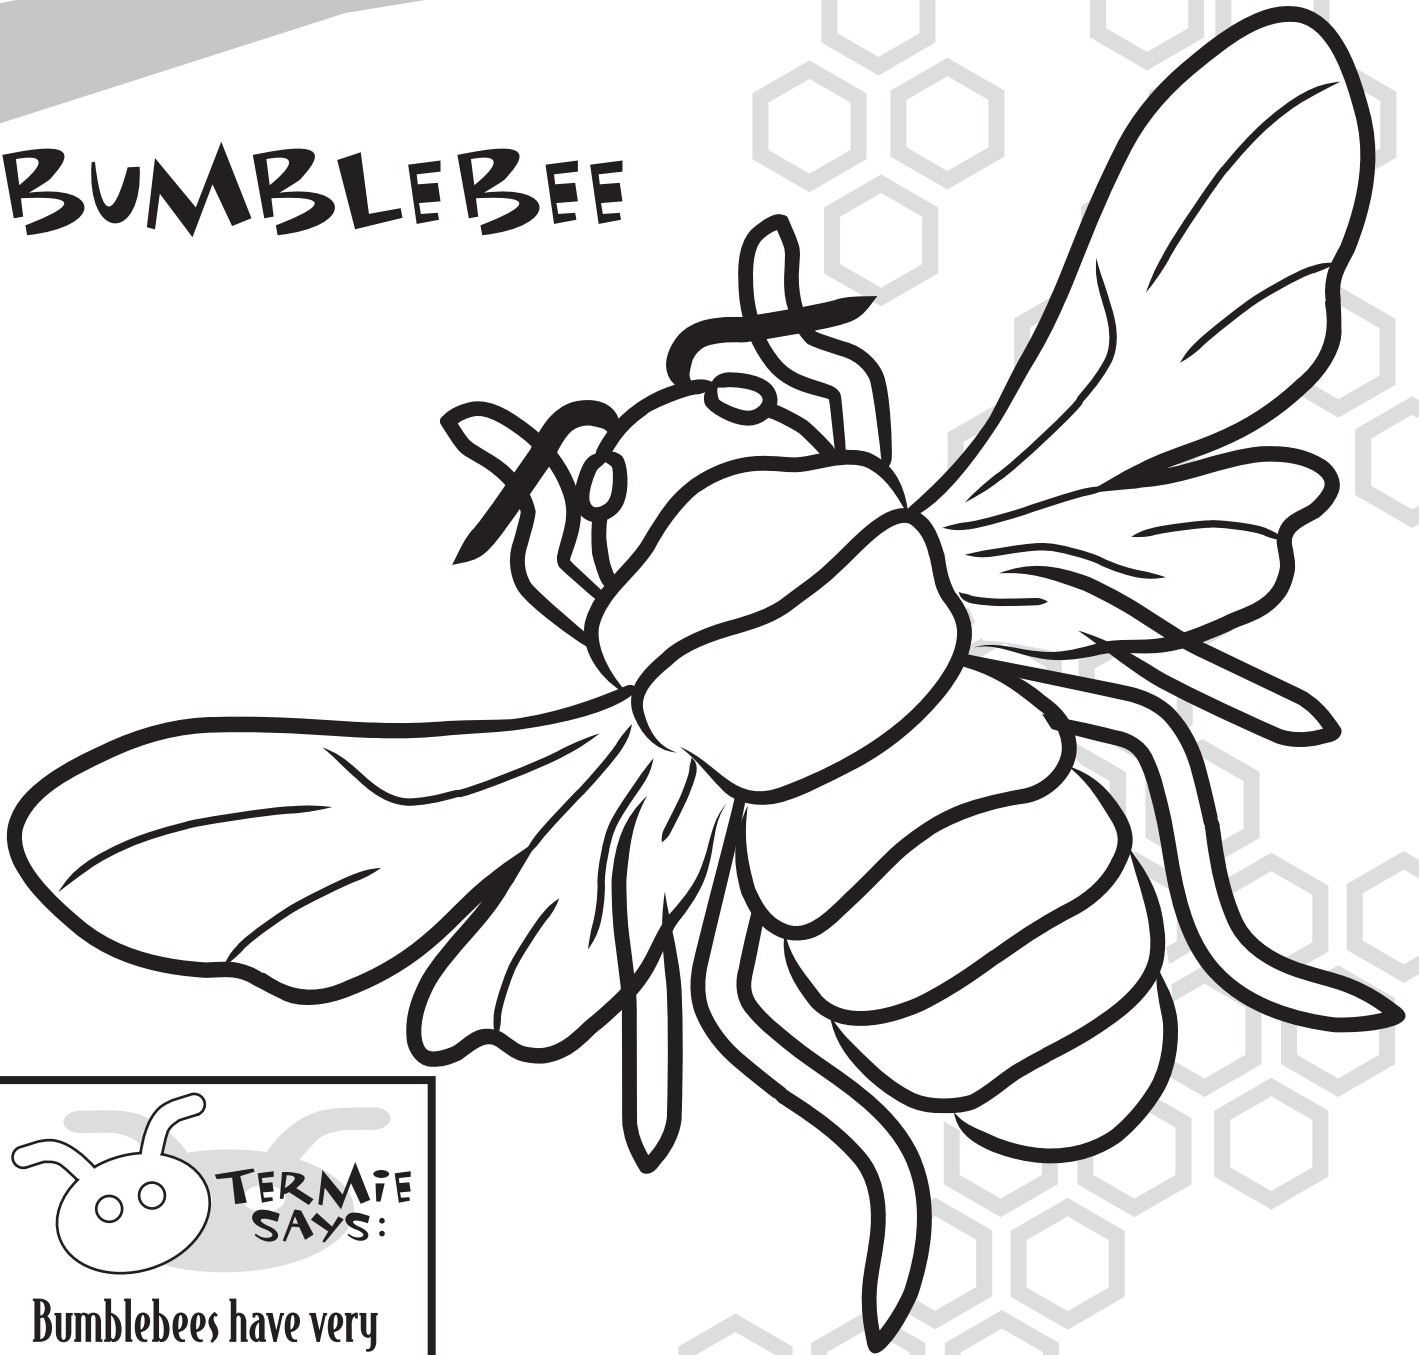

BUTTERFLY

**TERMIE
SAYS:**

Butterflies have long tube-like mouthparts so they can reach the nectar deep inside flowers. The monarch butterfly spends the winter in Mexico and may fly over 2,000 miles to get there.

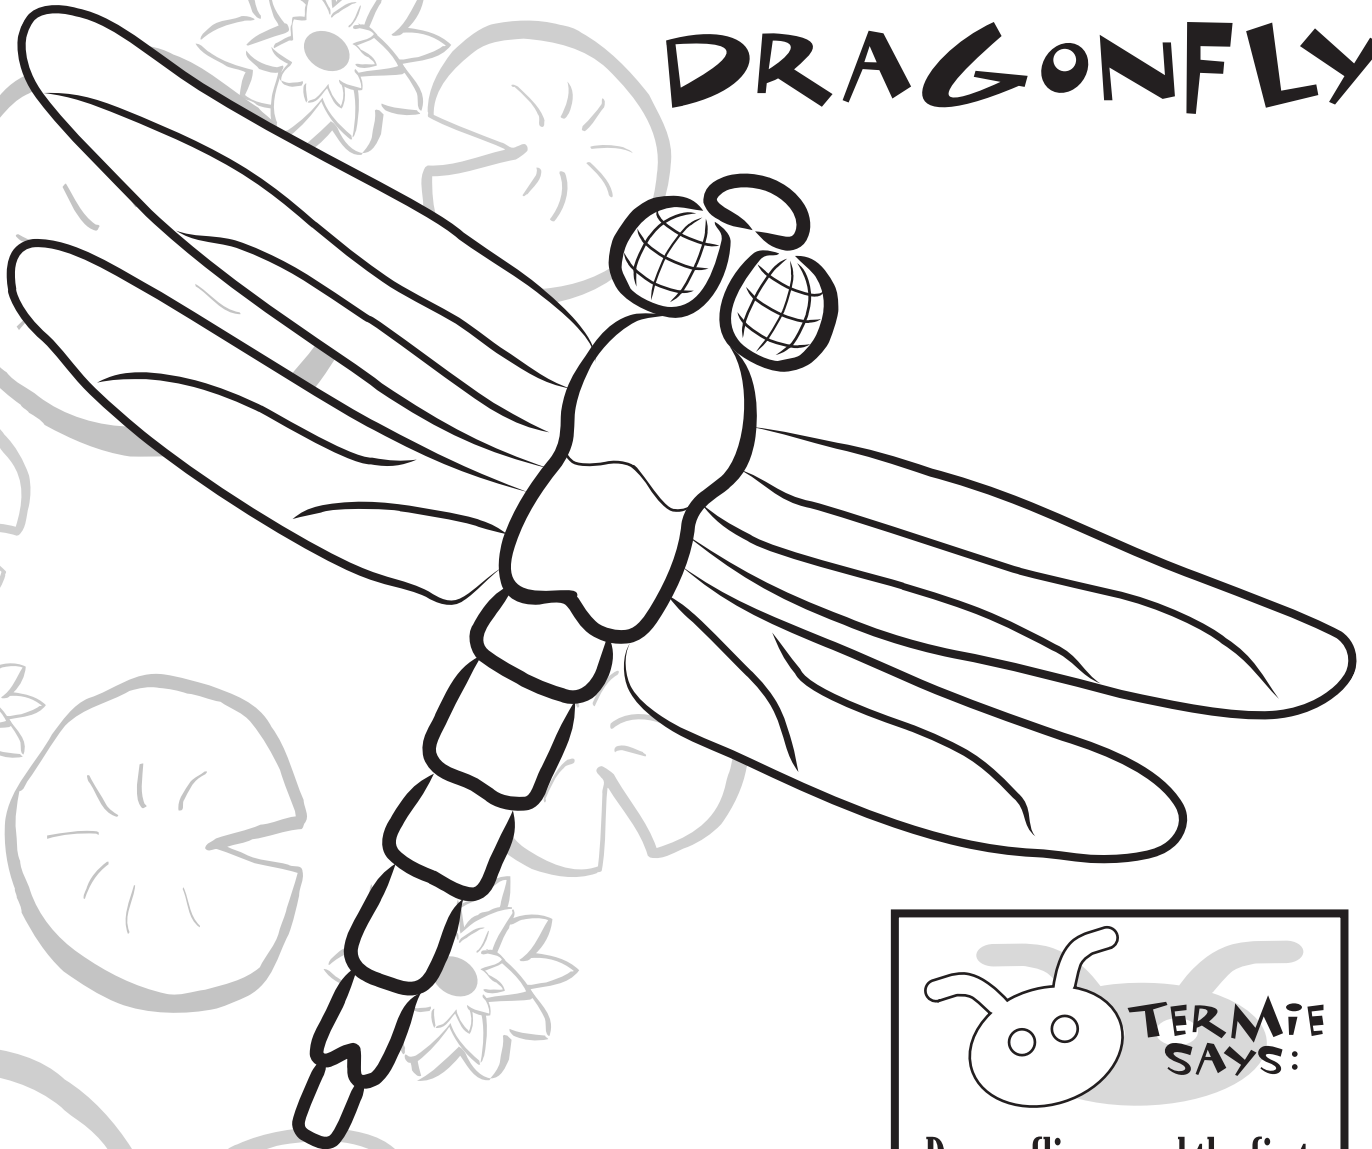

BUMBLEBEE

**TERMIE
SAYS:**

Bumblebees have very few natural enemies except for skunks who find bumblebees very tasty, sting and all.

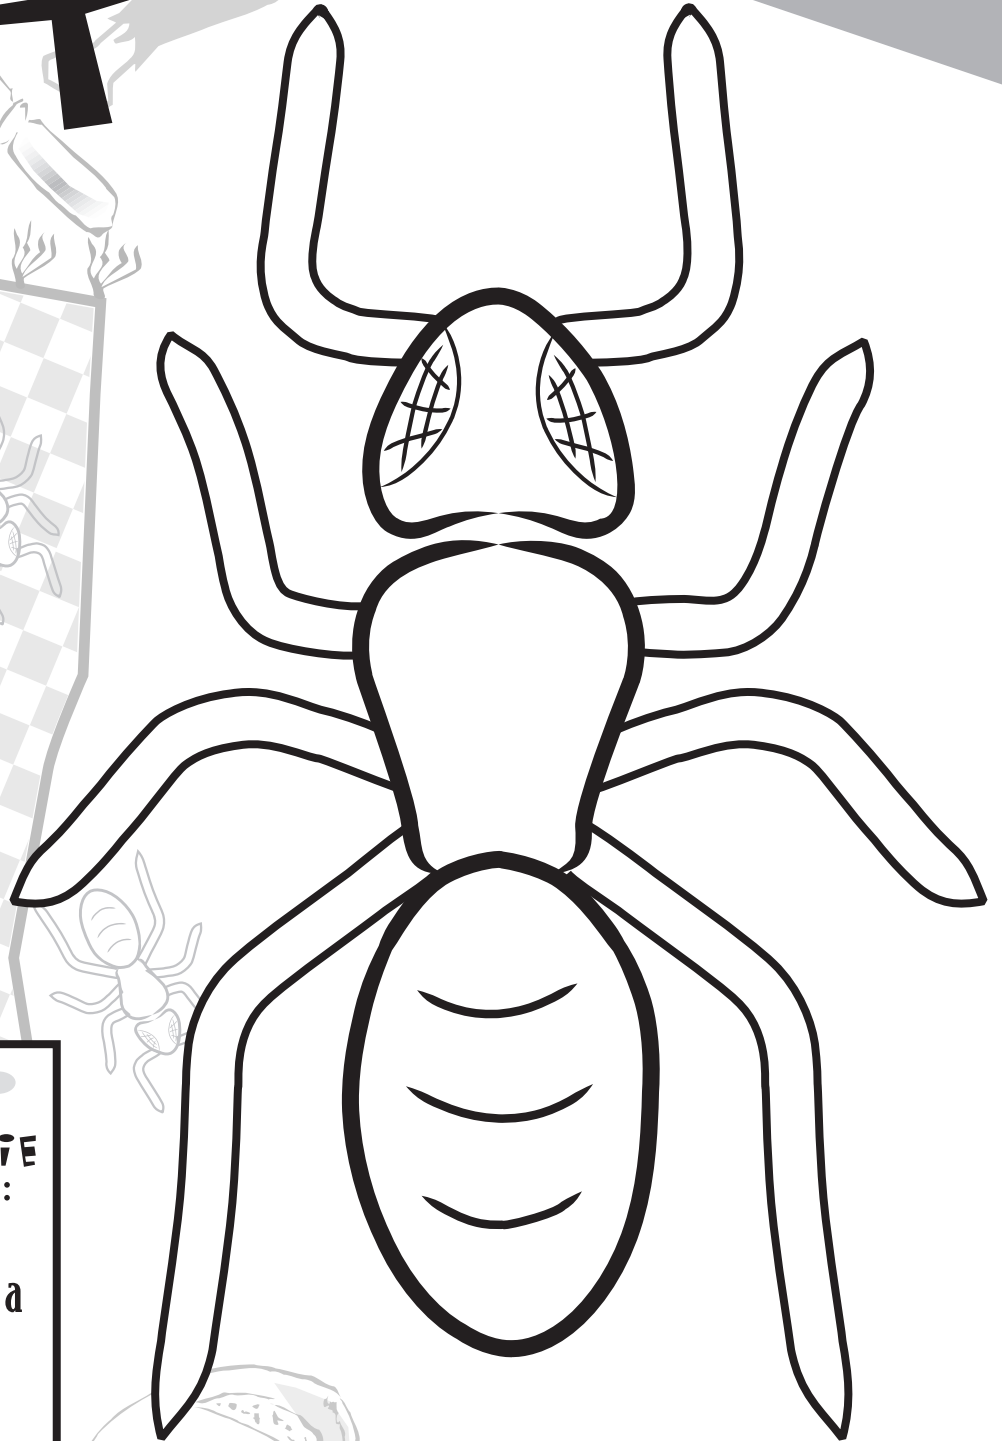

DRAGONFLY

**TERMIE
SAYS:**

Dragonflies spend the first two years of their lives as naiads living underwater in lakes and ponds. As adults they have to be fast so they can chase and catch the mosquitoes they eat.

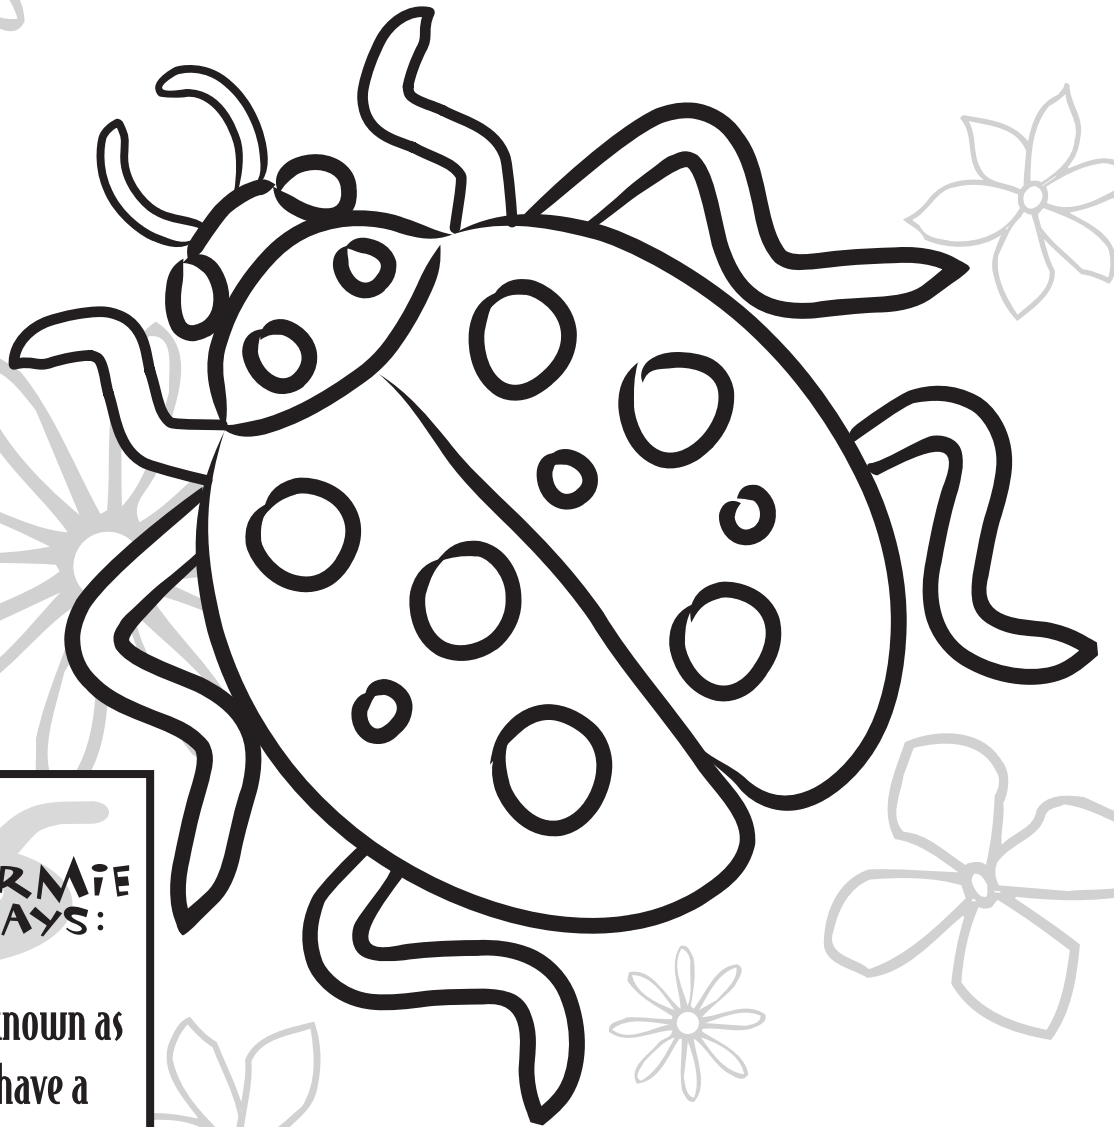

ANT

**TERMINIX
SAYS:**

If an ant were as big as a person, the ant could outrun a racehorse. Ants can also lift 20 times their body weight.

LADY BEETLE

**TERMIE
SAYS:**

More commonly known as ladybugs, they have a variety of color patterns ranging from black with two red spots to red with 19 black spots .
